

NIFTY FEED DISPENSER

The Nifty Feed Dispenser allows one person with a round bale handler, 3 PTH tractor or trailer style feeder, to load, transport and dispense grain, cake feed, pellets or supplements to livestock under range feeding conditions.

- an ideal pellet feeder
- dispenses feed at 15 foot intervals
- reduces feed loss
- reduces dust
- works well with most truck-mounted round bale handlers
- easily adapts to bale processors or 3 Point Hitch units
- adjustable door and baffled interior permits mixing of supplements with feed
- delivers enough supplement for up to 250 head in one trip
- self-contained trailer units

The diameter of the drum corresponds to the size of a round bale, and the volume of the drum allows for a loaded weight similar to a densely packed round bale. This matches the lifting capacity of the round bale handler, and the weight packs the snow into a 30 inch wide trough to avoid waste. The cleated circumference of the drum provides for sufficient traction to rotate the drum when it contacts the ground. The Nifty feed dispenser will help with winter and summer supplementing, pre-breeding conditioning, or extended pasture during drought conditions. An ideal feeding system.

Easy to load ~ Easy to feed
